defined by a SOAP specification:

- A processing model for messages
- An *envelope* for the exchange of XML documents
- Error handling
- The use of a transport protocol (for example, HTTP)
- An encryption schema for data types

WSDL 11.4

WSDL (*Web Services Description Language*) is an XML format for the description of Web services. The following elements are defined by WSDL:

- The Web service interface (IDL)
- One or more transport protocols that are used as access to the Web service (for example, SOAP)
- The Service Endpoints (URL)
