Oracle JDeveloper is the development environment for Oracle Fusion Middleware with specific extensions that cover Oracle SOA Suite, Oracle WebCenter Suite, and Oracle BI.

Diagrams allow developers to build BPM, BPEL and ESB processes, and a declarative editor provides an easy way to define business rules for the Oracle SOA Suite, all from within JDeveloper. Rich Web interfaces for BAM and Human Workflows can quickly be developed with Oracle ADF in JDeveloper.

Oracle WebCenter adds capabilities for development and consumption of portlets, integration with content repositories, and a host of Web 2.0 services to the list of features available in Oracle JDeveloper.

Integration with Oracle BI allows the definition of new reports and graphs on various sources of data as well as inclusion of these reports in existing Oracle ADF pages.

## Summary

Oracle JDeveloper offers a complete solution for developers looking to increase their productivity building cutting edge enterprise Java applications.
